Education

AMIK Citra Buana Indonesia – Sukabumi   **Aug 2015 - Aug 2018**
Diploma Degre of Informatics Management, GPA: 3.23/4.00

- Final Project : "Aplikasi Pengelolaan Nilai Raport Berbasis Web PHP dan MYSQL Menggunakan perancangan UML di SDN Kebonwaru".

Eduwork.id – Yogyakarta(Online)   **Oct 2024 – Feb 2025**
QA Effective Testing Strategies

- A skills development program and basic IT training, specifically in Quality Assurance (QA).
- Built fundamental QA skills, covering manual testing, automated testing, including web testing, Android application testing, and API testing.

- Utilized various testing tools, such as Cypress, JMeter, Katalon Studio, Postman, SQL, and JavaScript.

Project Experience

Automation Tenting (Cypress) XYZ Bank   **Sep 2024 – Dec 2024**

- Developed and executed **automated functional tests** for the **Bank XYZ web application** using **Cypress**, ensuring core banking features work as expected.
- Tested key functionalities, including **user registration, login, account creation, transaction history, withdrawals, and negative test cases**.
- Designed structured **test cases** to validate application behavior and improve overall test coverage
- Automated repetitive test scenarios, reducing manual testing time and increasing efficiency.
- Link Github : Github

Manual Functional Testing (Qase.io) Career Djarum website   **Feb 2025 – Feb 2025**

- Conducted manual functional testing on the **Career Djarum website** to ensure core features work as expected.
- Tested user registration, login, password recovery, and negative test cases for registration and login.
- Designed structured test cases to validate application behavior and improve test coverage.
- Identified and reported functional issues to enhance user experience.
- Link Drive : Drive

Performance Testing (Jmeter) Mangaplus Shueisha   **Feb 2025 – Feb 2025**

- Conducted performance testing on the **Mangaplus Shueisha** website using JMeter to evaluate server performance under high load.
- Utilized **Graph Results** to analyze average response time, deviation, median, throughput, and request distribution.
- Used **Result in Table** to assess key metrics such as execution time, latency, connection time, and data transmission rates
- Identified potential bottlenecks by analyzing response time variations and server performance in handling concurrent requests.
